

## **Aims & Scope of the Japanese Journal of Risk Analysis (JJRA)**

Enacted by the Executive Board on June 26, 2020

### **Aims:**

The purpose of the Japanese Journal of Risk Analysis (JJRA) is to provide researchers, students, and professionals dealing with risk in public administration and the private sector with the following kinds of research findings and information relating to risk.

- Original research findings in theoretical or empirical studies whose contents contribute to academic, societal, or industrial development.
- News and update reports of ongoing research relating to risk theory or survey findings whose contents contribute to the development of risk research.
- Logical reports of ideas for societal implementation of risk-related theory based on academic knowledge whose contents contribute to societal welfare and development.
- Wide-ranging knowledge in specific risk-related fields or spanning multiple associated fields.

### **Scope:**

The Japanese Journal of Risk Analysis provides research findings and information in the following fields.

- Environmental and health risk
- Climate change and disaster risk
- Engineering and technology risk
- Economic and insurance risk
- Infectious disease risk
- Systemic risk
- Ecological risk
- IT and cyber risk
- Risk perception and communication
- Risk analysis and assessment methods
- Risk management and risk policy
- Risk governance
- Regulatory science
- Risk comparison and risk trade-off
- Risk countermeasures and crisis management
- Societal implementation of risk analysis
- Other risk analysis-related topics
